Scope and Goals

The 2014 International Conference on Cloud Computing and Big Data (CCBD) Workshops provides a forum for small-sized groups of 20~50 participants to discuss current topics in cloud computing and big data research and practice. CCBD Workshops will provide opportunities for researchers to exchange and discuss innovative scientific and engineering ideas at a stage before they have matured to warrant conference or journal publication. CCBD Workshops also serve as incubators for scientific ideas or new scientific communities that form and share a particular research agenda.

Information for potential Workshop organizers

Workshops can be quite diverse. The workshops may be either one or two days long and may be held before or after the main conference. All accepted papers from the workshops will be published by CPS and submitted for indexing to EI. The extended version of distinguished papers will be recommended to Chinese Journal of Electronics for publication after the conference. The call for proposals for the workshops is now open, including title, scope and goals, potential technical program committees, and schedule. Contact information: ccbd2014@whu.edu.cn.

Workshop Proposal Deadlines

- Workshop proposal submissions due: July 20, 2014
- Notification to organizers: July 30, 2014
